How the pictures were made

- **From the live sites**, on Monday November 2nd 2026 at about 6.45pm, in Chromium.
- **Sizes:** computer at 1440px wide; phone at 390px wide with touch. Very tall pages are cut into halves (one per page) or into strips shown side by side, read left to right.
- **Content:** pictures marked SAMPLE use content typed in for the picture (a running order, a week, a flowchart). Clockmaker's clock is its built-in Example. Pictures marked REAL show the sites' real figures at the time: Hindcaster's final update for Sunday November 1st, Lightreader's times for Caversham (RG4), Refueller's prices from the 4.15pm collection, and Riverwatcher's levels from the 6.10pm collection.
- **Checks:** no page errors and no sideways scrolling on any picture, and the brand fonts loaded every time.
- **Light mode** throughout, apart from the dark-mode page near the end.

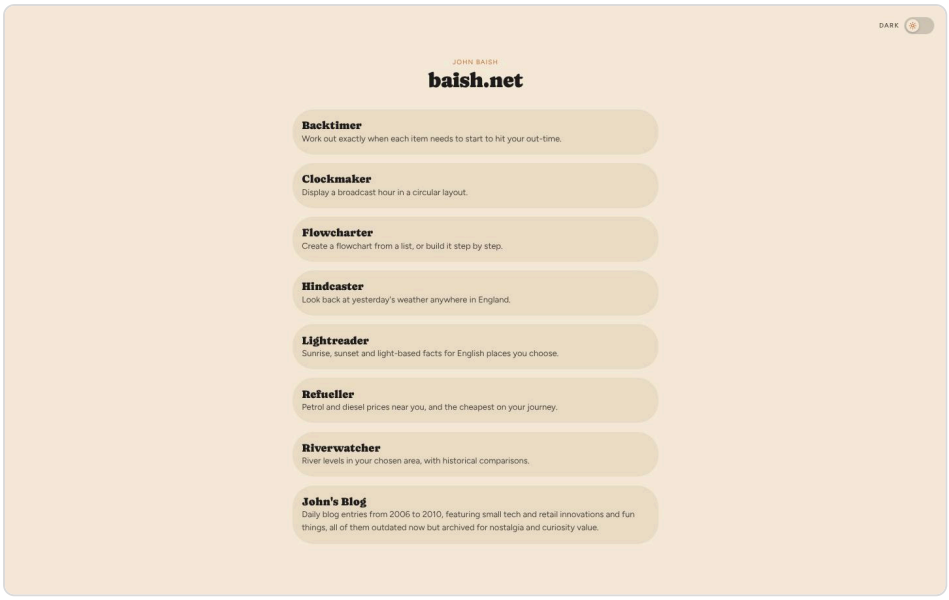

Fig 1. The hub on a computer (1440px). Seven tools in alphabetical order, then John's blog.

Fig 2. The hub on a phone (390px), first screen.

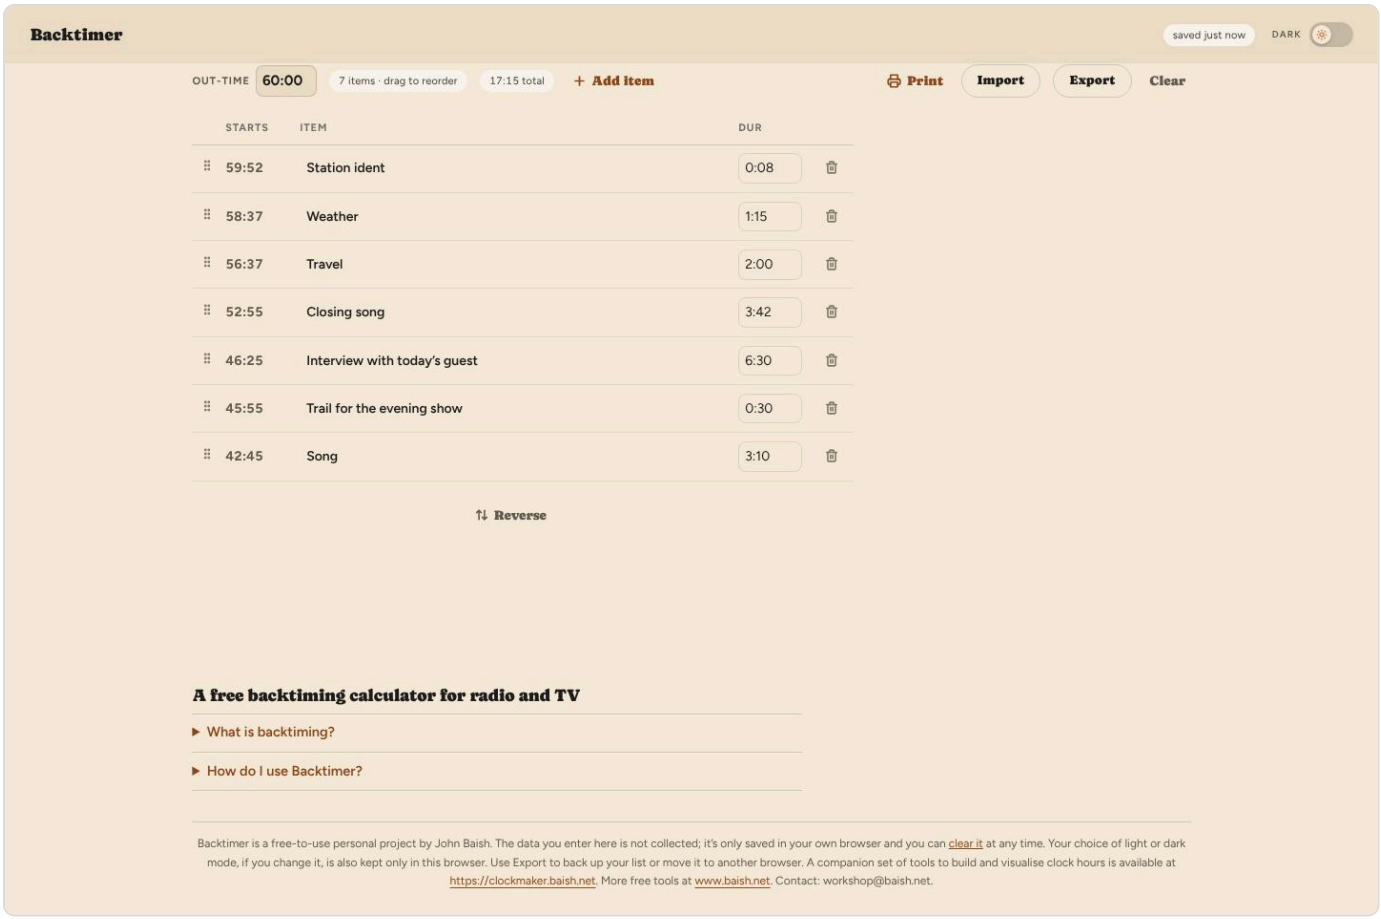

Fig 3. SAMPLE A running order to the news at 60:00 (1440px): seven items totalling 17:15, from "Station ident" (starts 59:52) back to "Song" (42:45).

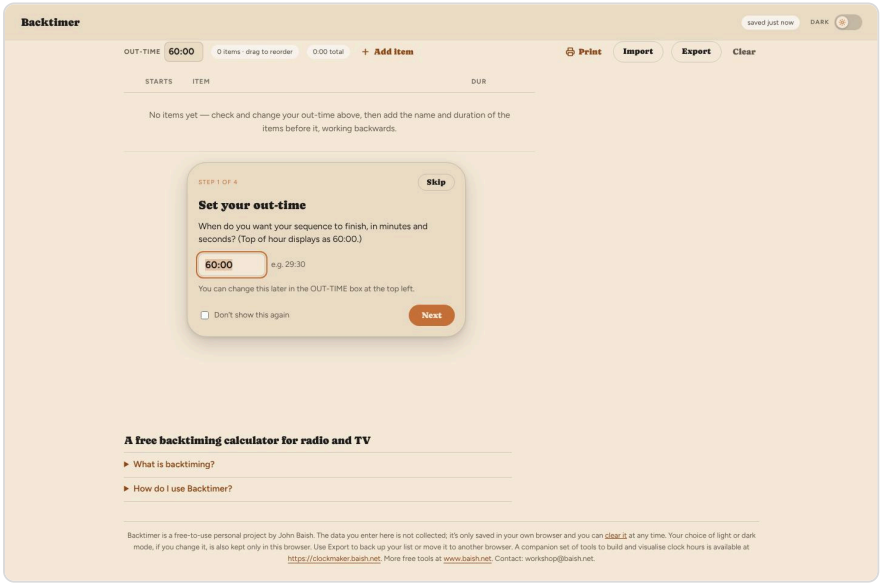

Fig 4. A first visit: the getting-started walkthrough, step 1 of 4, under the empty list.

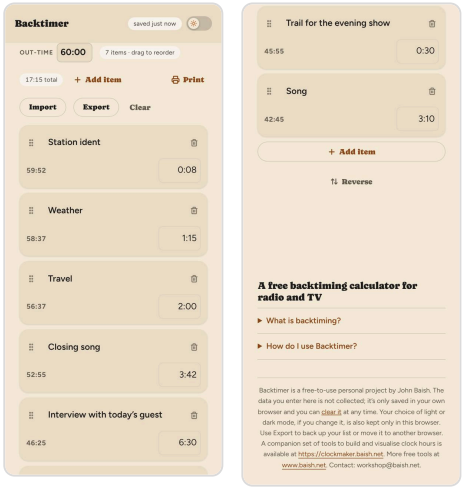

Fig 5. SAMPLE The running order on a phone (full page, two strips, read left to right).

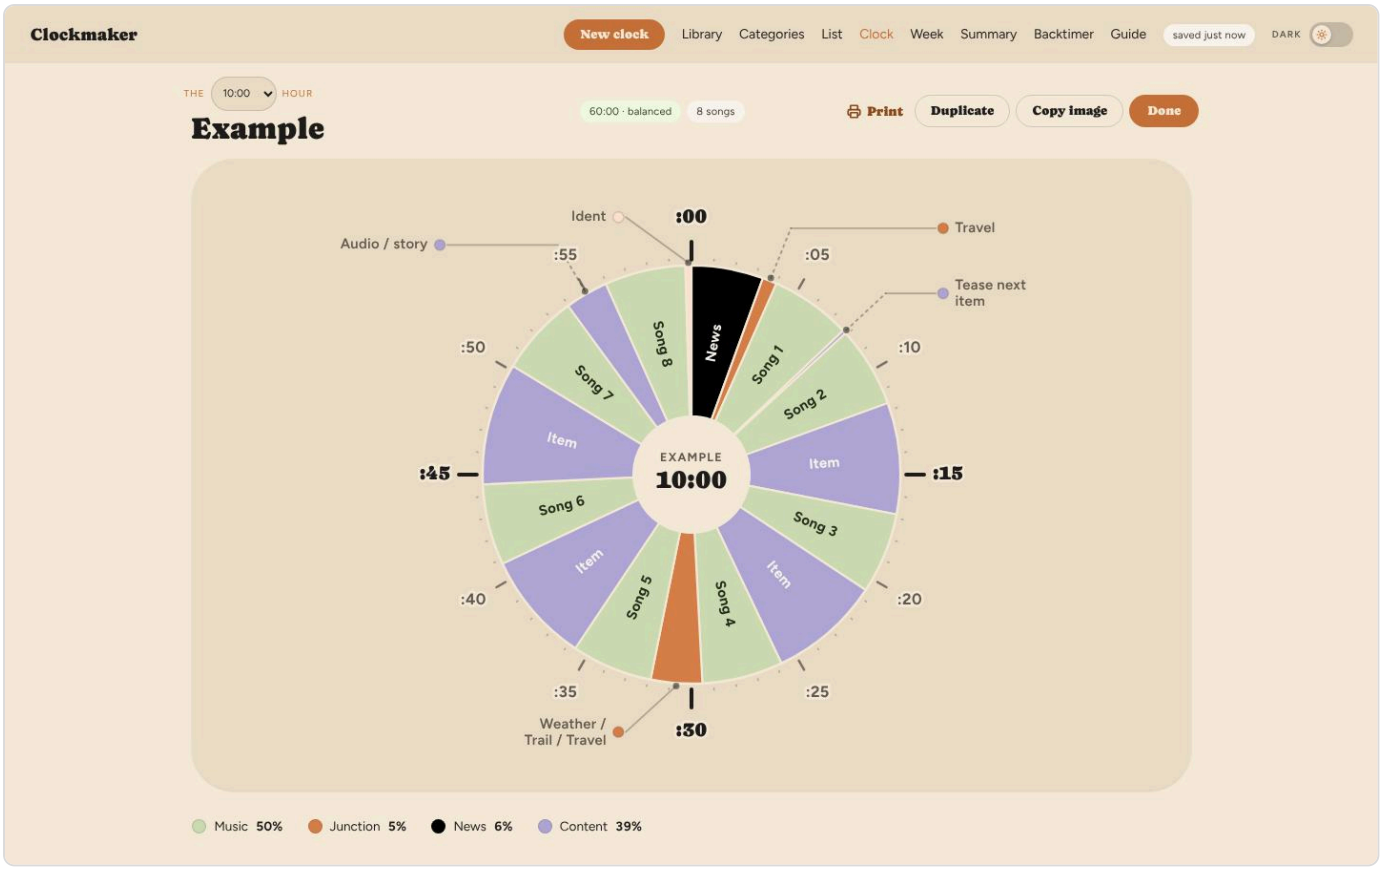

Fig 6. The Clock screen (1440px): the built-in Example clock for 10:00, 18 segments adding up to exactly 60:00 ("balanced", 8 songs), with callouts for the short items.

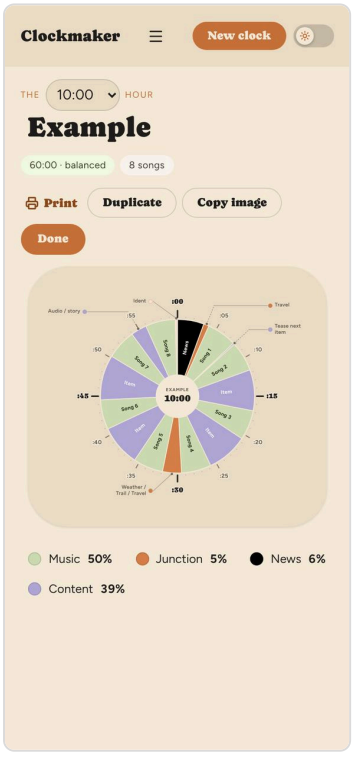

Fig 7. The same clock on a phone (first screen).

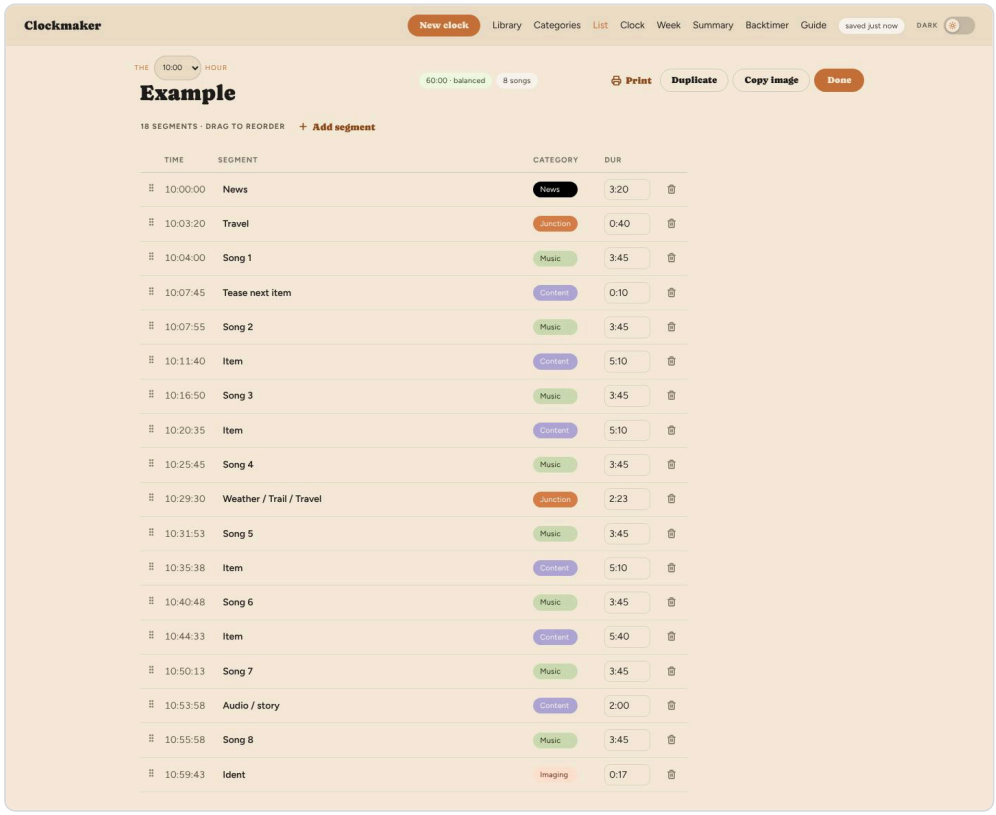

Fig 8. The Example clock as a List: times worked out from 10:00, category pills, durations in outlined boxes.

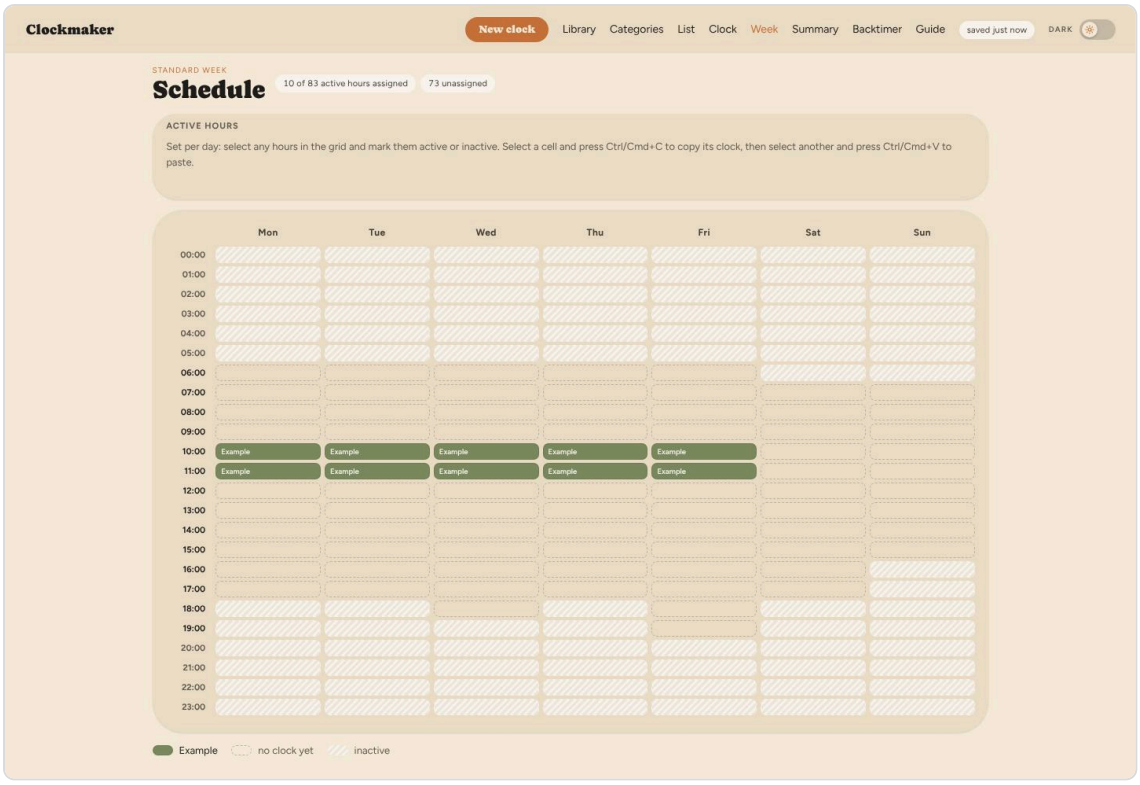

Fig 9. SAMPLE Week ("Schedule"), with the Example clock given to 10:00 and 11:00 on weekdays; hatched cells are inactive hours.

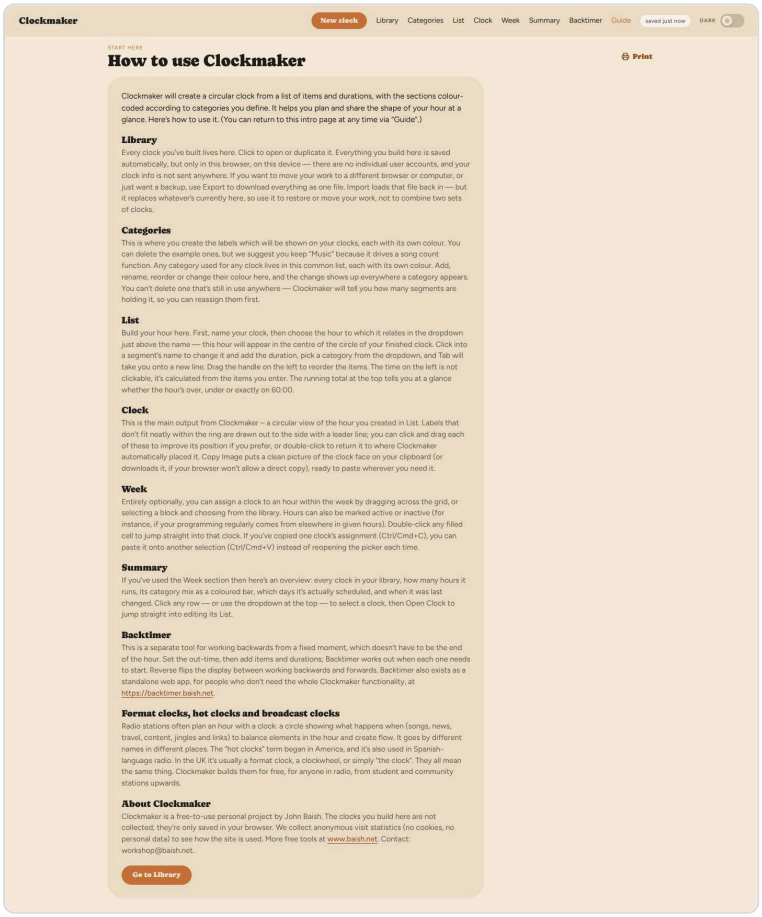

Fig 10. The Guide, shown on a first visit: John's own text, a section per screen, and "About Clockmaker".

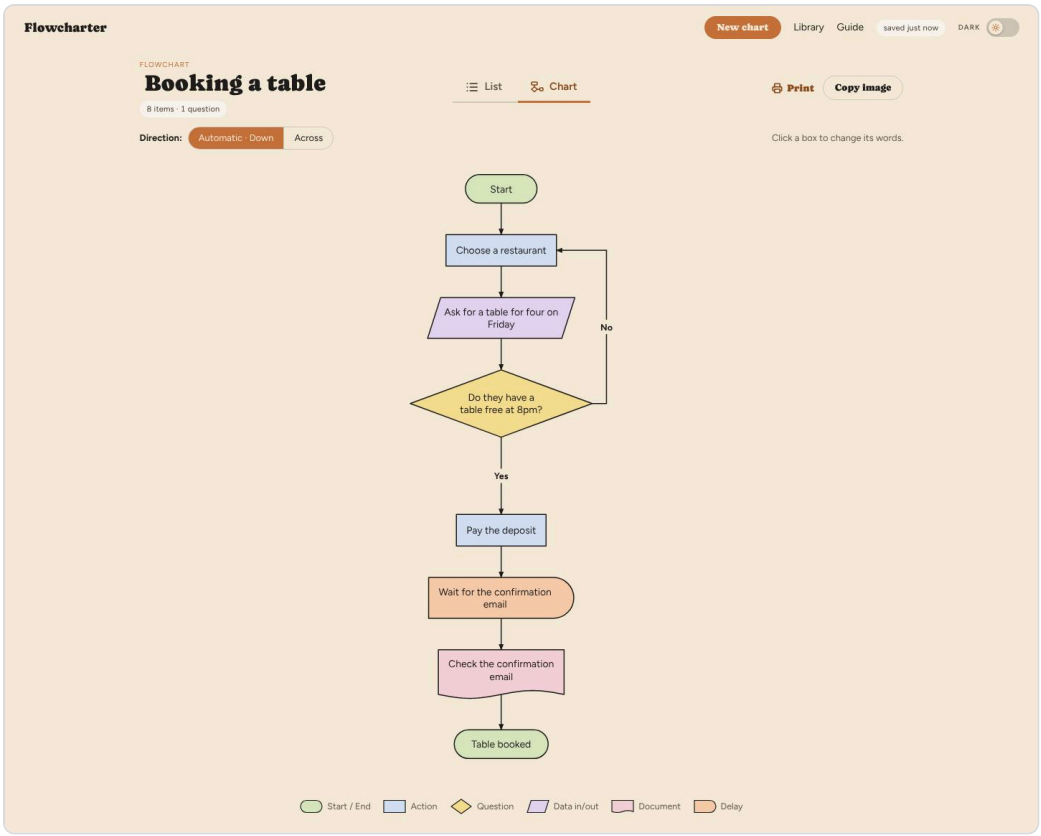

Fig 11. SAMPLE "Booking a table" drawn from an eight-row list (1440px). Automatic chose Down; the question's "No" loops back.

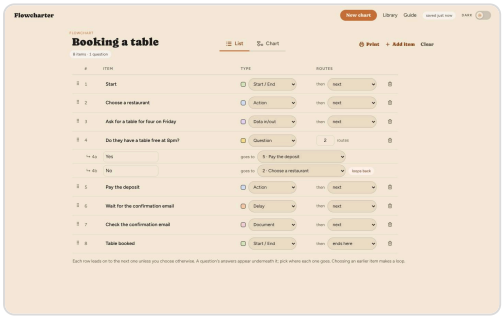

Fig 12. SAMPLE The list behind it: text, shape and where each row goes.

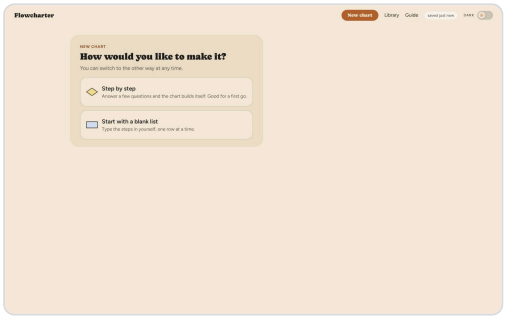

Fig 13. "New chart": step by step on cards, or a blank list.

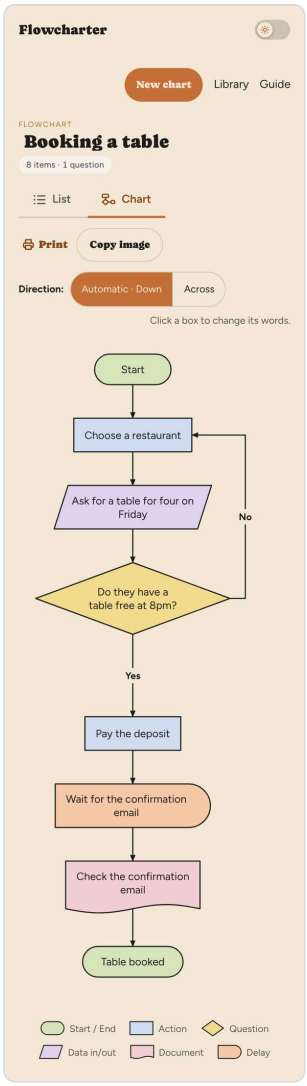

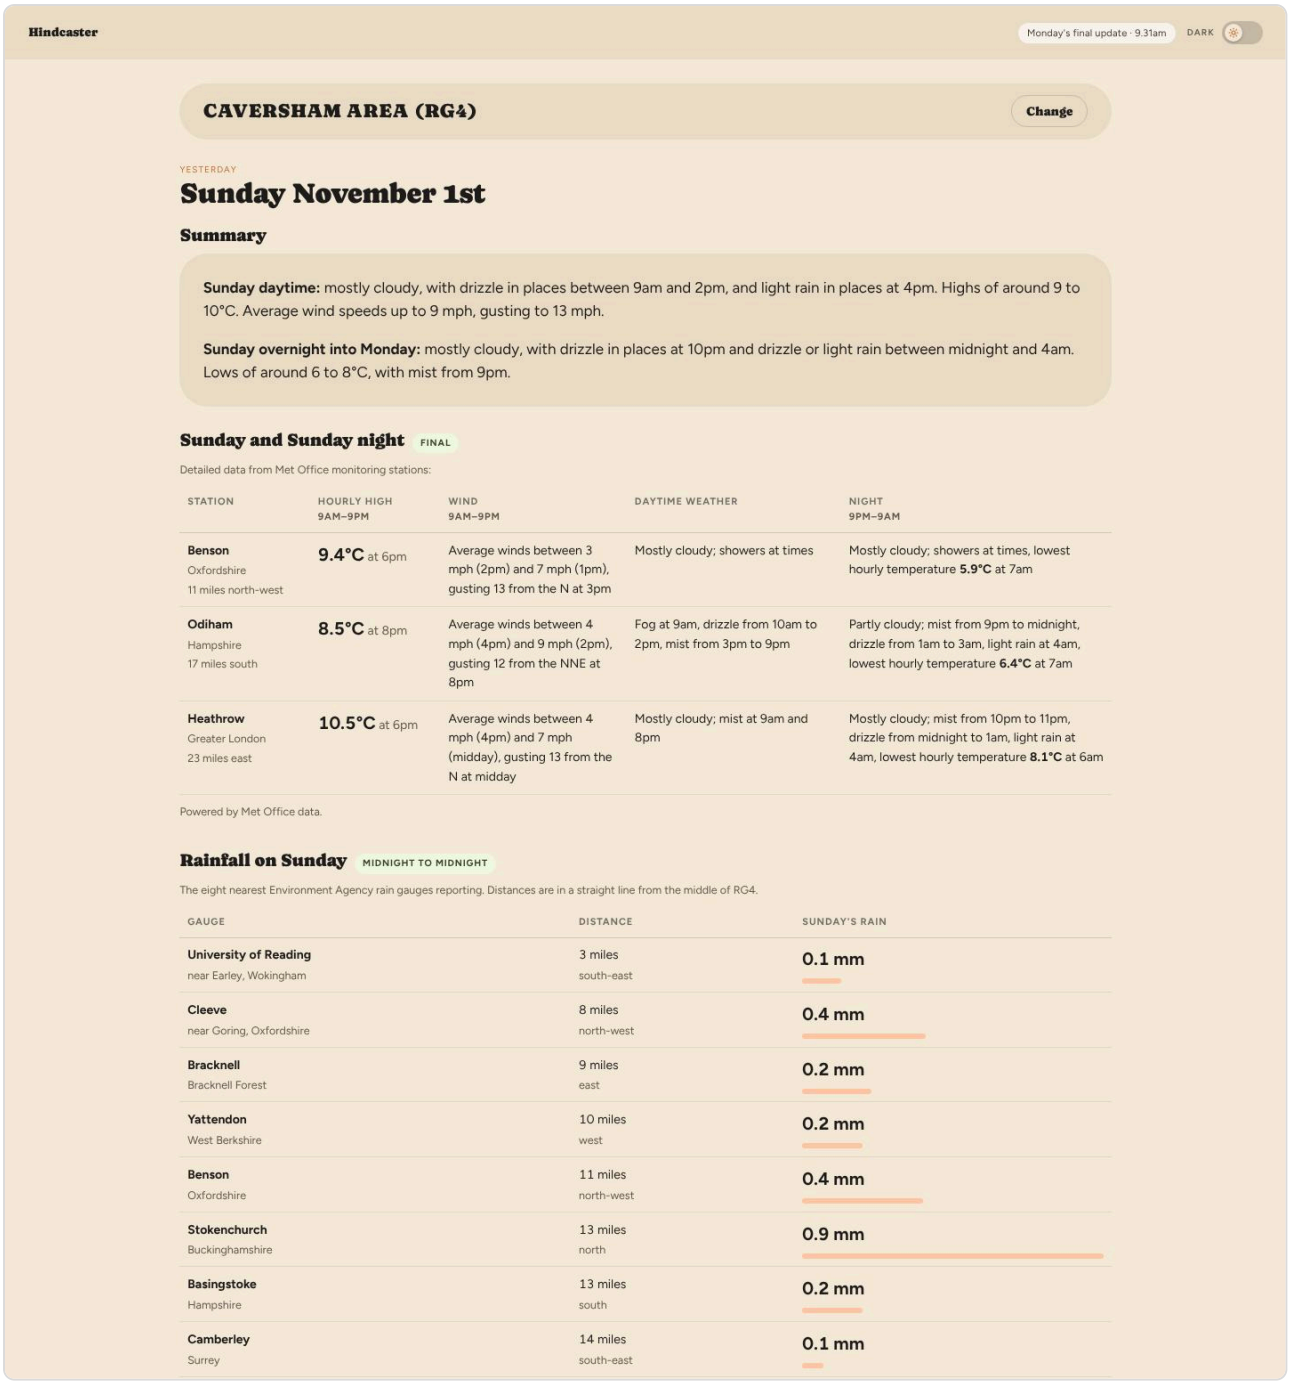

Fig 14. SAMPLE The chart on a phone (full page).

Hindcaster

Monday's final update · 9.31am DARK

CAVERSHAM AREA (RG4) Change

YESTERDAY

Sunday November 1st

Summary

Sunday daytime: mostly cloudy, with drizzle in places between 9am and 2pm, and light rain in places at 4pm. Highs of around 9 to 10°C. Average wind speeds up to 9 mph, gusting to 13 mph.

Sunday overnight into Monday: mostly cloudy, with drizzle in places at 10pm and drizzle or light rain between midnight and 4am. Lows of around 6 to 8°C, with mist from 9pm.

Sunday and Sunday night FINAL

Detailed data from Met Office monitoring stations:

STATION	HOURLY HIGH 9AM–9PM	WIND 9AM–9PM	DAYTIME WEATHER	NIGHT 9PM–9AM
Benson Oxfordshire 11 miles north-west	**9.4°C** at 6pm	Average winds between 3 mph (2pm) and 7 mph (1pm), gusting 13 from the N at 3pm	Mostly cloudy; showers at times	Mostly cloudy; showers at times, lowest hourly temperature **5.9°C** at 7am
Odiham Hampshire 17 miles south	**8.5°C** at 8pm	Average winds between 4 mph (4pm) and 9 mph (2pm), gusting 12 from the NNE at 8pm	Fog at 9am, drizzle from 10am to 2pm, mist from 3pm to 9pm	Partly cloudy; mist from 9pm to midnight, drizzle from 1am to 3am, light rain at 4am, lowest hourly temperature **6.4°C** at 7am
Heathrow Greater London 23 miles east	**10.5°C** at 6pm	Average winds between 4 mph (4pm) and 7 mph (midday), gusting 13 from the N at midday	Mostly cloudy; mist at 9am and 8pm	Mostly cloudy; mist from 10pm to 11pm, drizzle from midnight to 1am, light rain at 4am, lowest hourly temperature **8.1°C** at 6am

Powered by Met Office data.

Rainfall on Sunday MIDNIGHT TO MIDNIGHT

The eight nearest Environment Agency rain gauges reporting. Distances are in a straight line from the middle of RG4.

GAUGE	DISTANCE	SUNDAY'S RAIN
University of Reading near Earley, Wokingham	3 miles south-east	0.1 mm
Cleeve near Goring, Oxfordshire	8 miles north-west	0.4 mm
Bracknell Bracknell Forest	9 miles east	0.2 mm
Yattendon West Berkshire	10 miles west	0.2 mm
Benson Oxfordshire	11 miles north-west	0.4 mm
Stokenchurch Buckinghamshire	13 miles north	0.9 mm
Basingstoke Hampshire	13 miles south	0.2 mm
Camberley Surrey	14 miles south-east	0.1 mm

Fig 15. REAL Postcode district RG4 (Caversham, Reading), Sunday November 1st, final update at 9.31am on November 2nd (1440px, top half): the Summary, the three stations chosen round the postcode, and the nearest rain gauges.

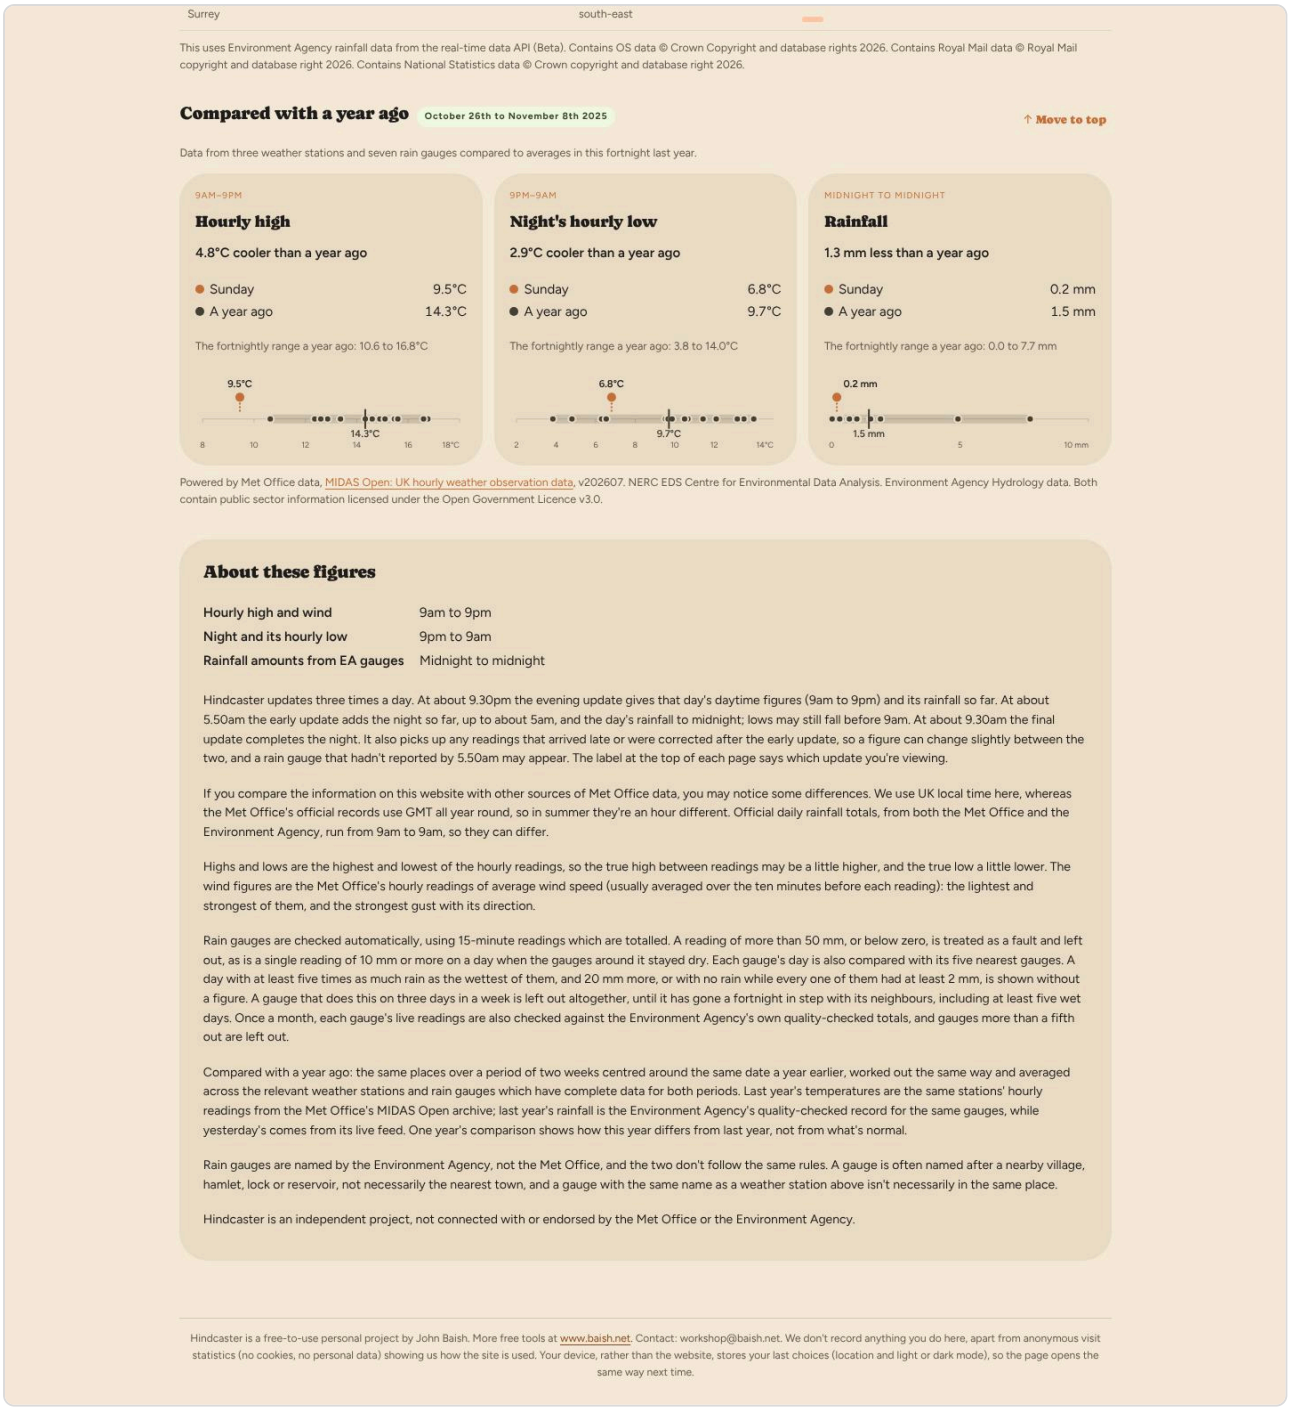

Fig 16. REAL RG4, bottom half: "Compared with a year ago", "About these figures" and the footer.

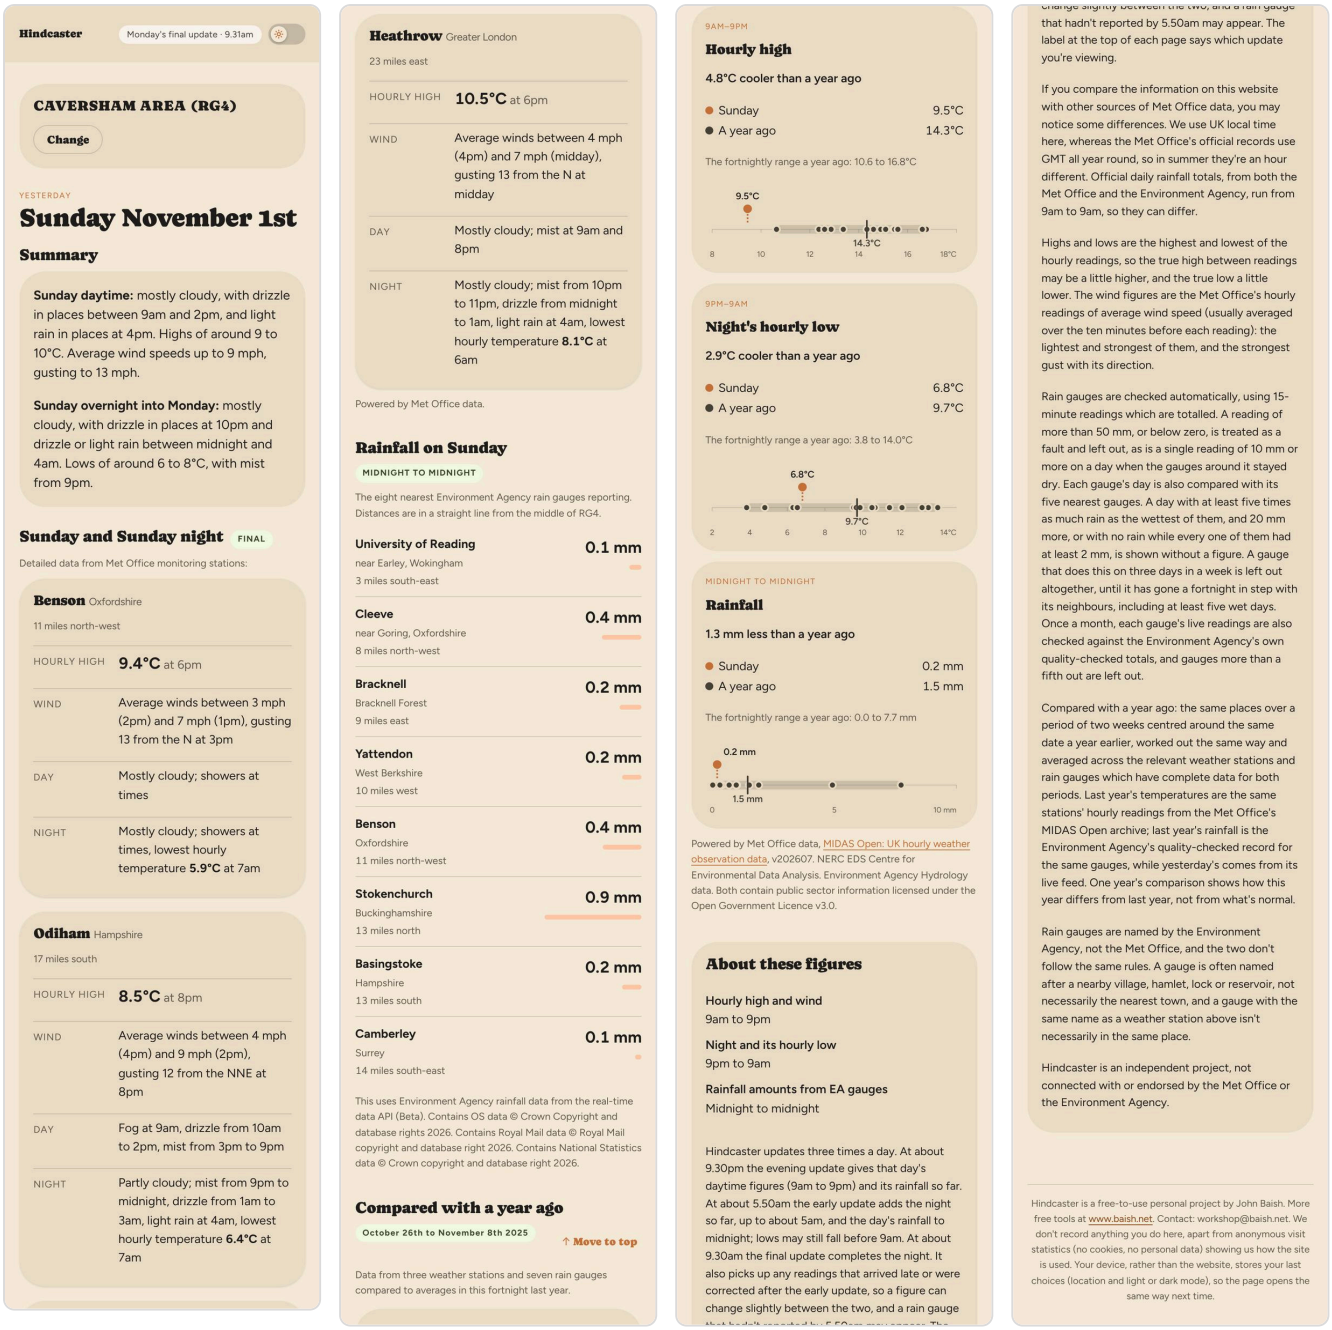

Fig 17. REAL RG4 on a phone (full page, four strips, read left to right).

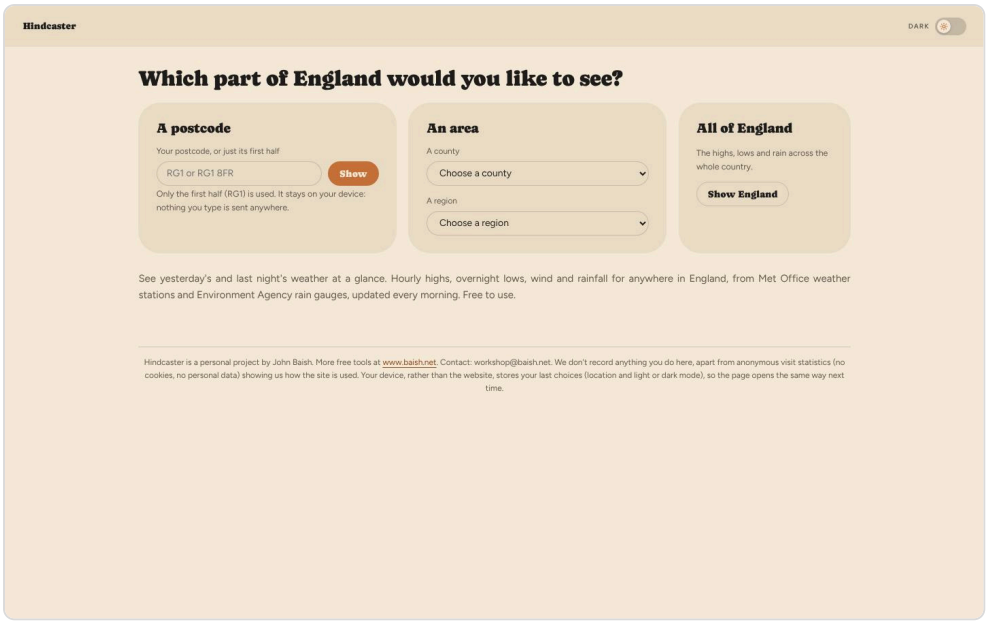

Fig 18. The chooser a first-time visitor sees: postcode, county or region, or all of England.

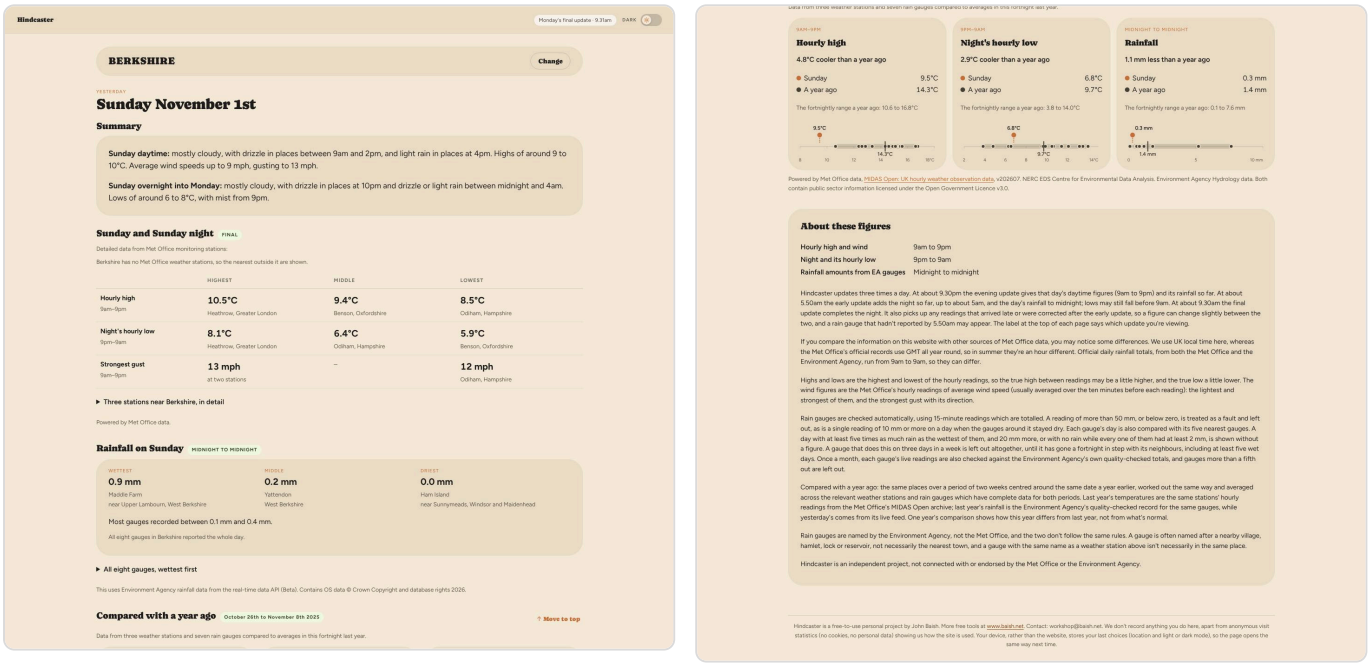

Fig 19. REAL Berkshire, an area view (1440px, two strips): highest, middle and lowest for each measure, then rainfall across the county.

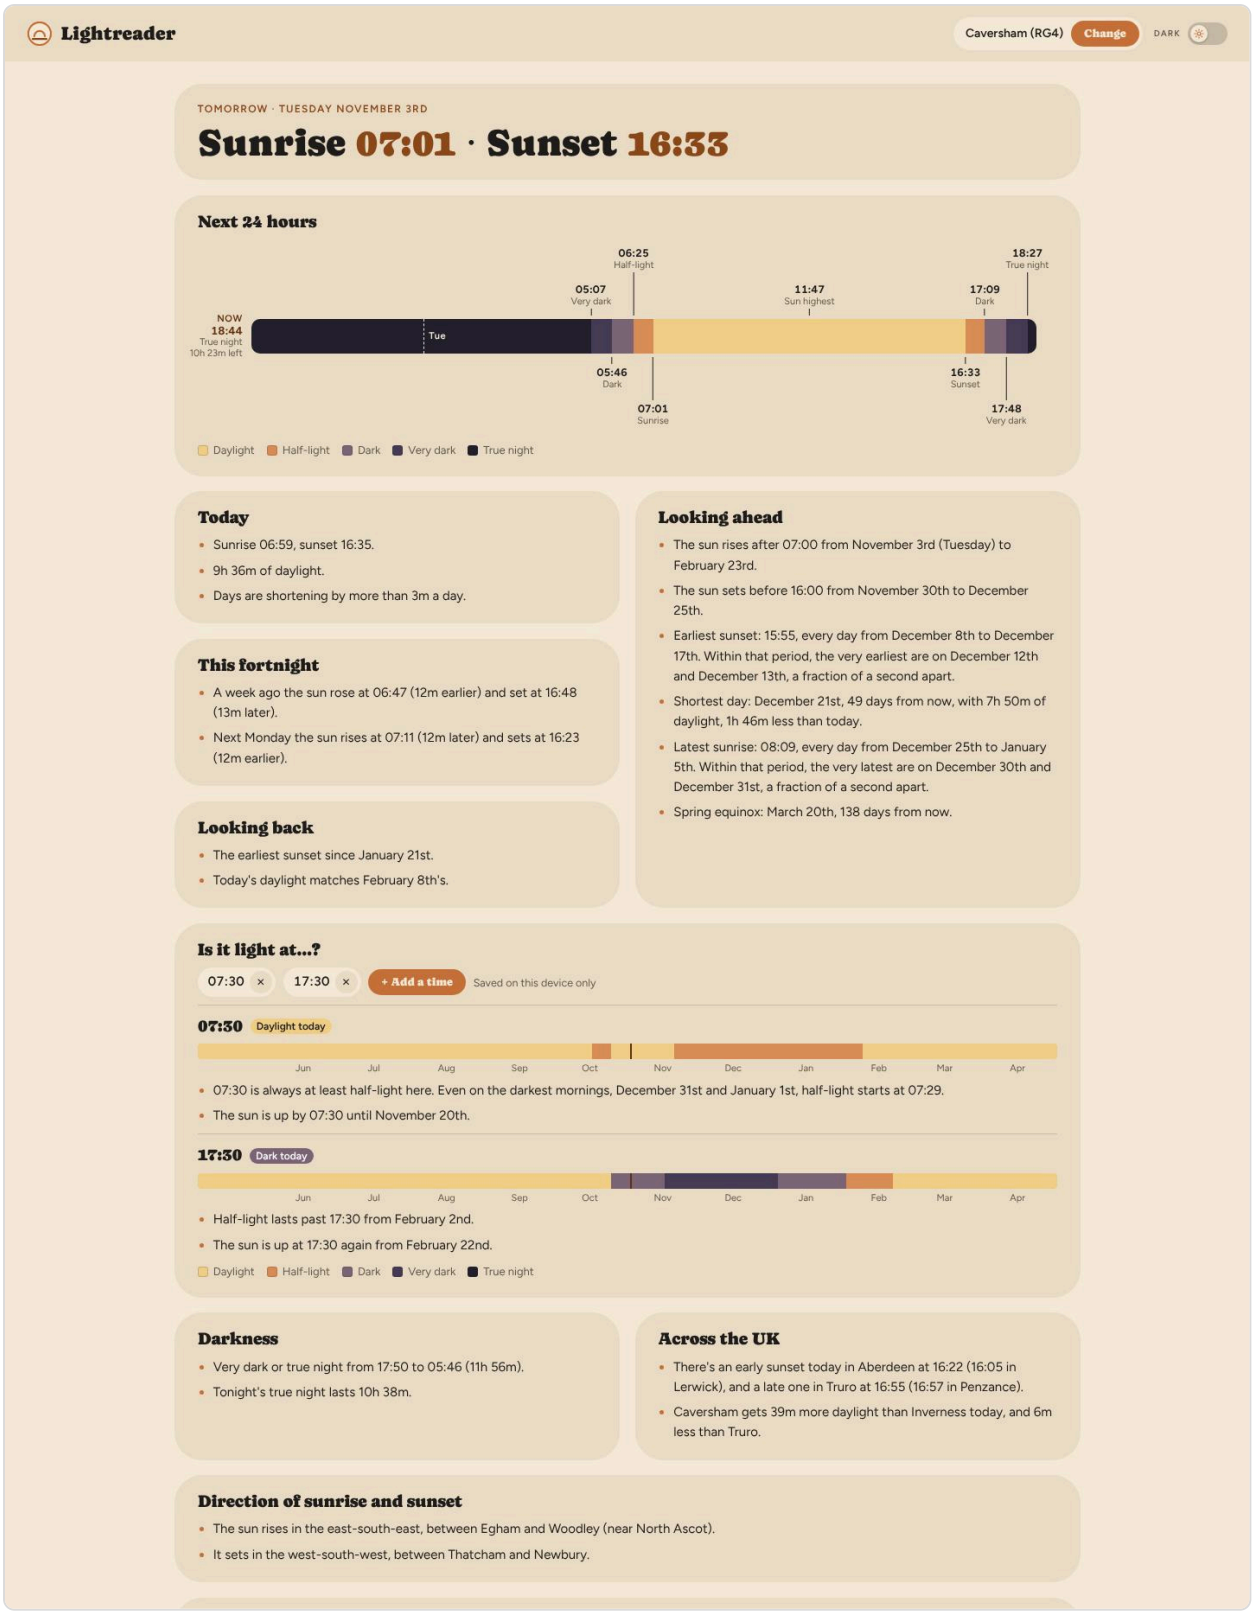

Fig 20. REAL RG4 (Caversham) at 18:44 on Monday November 2nd (1440px, top half): tomorrow's sunrise and sunset (shown once it's dark), the next 24 hours as a ribbon of light, then sentence cards (Today, This fortnight, Looking back, Looking ahead and more).

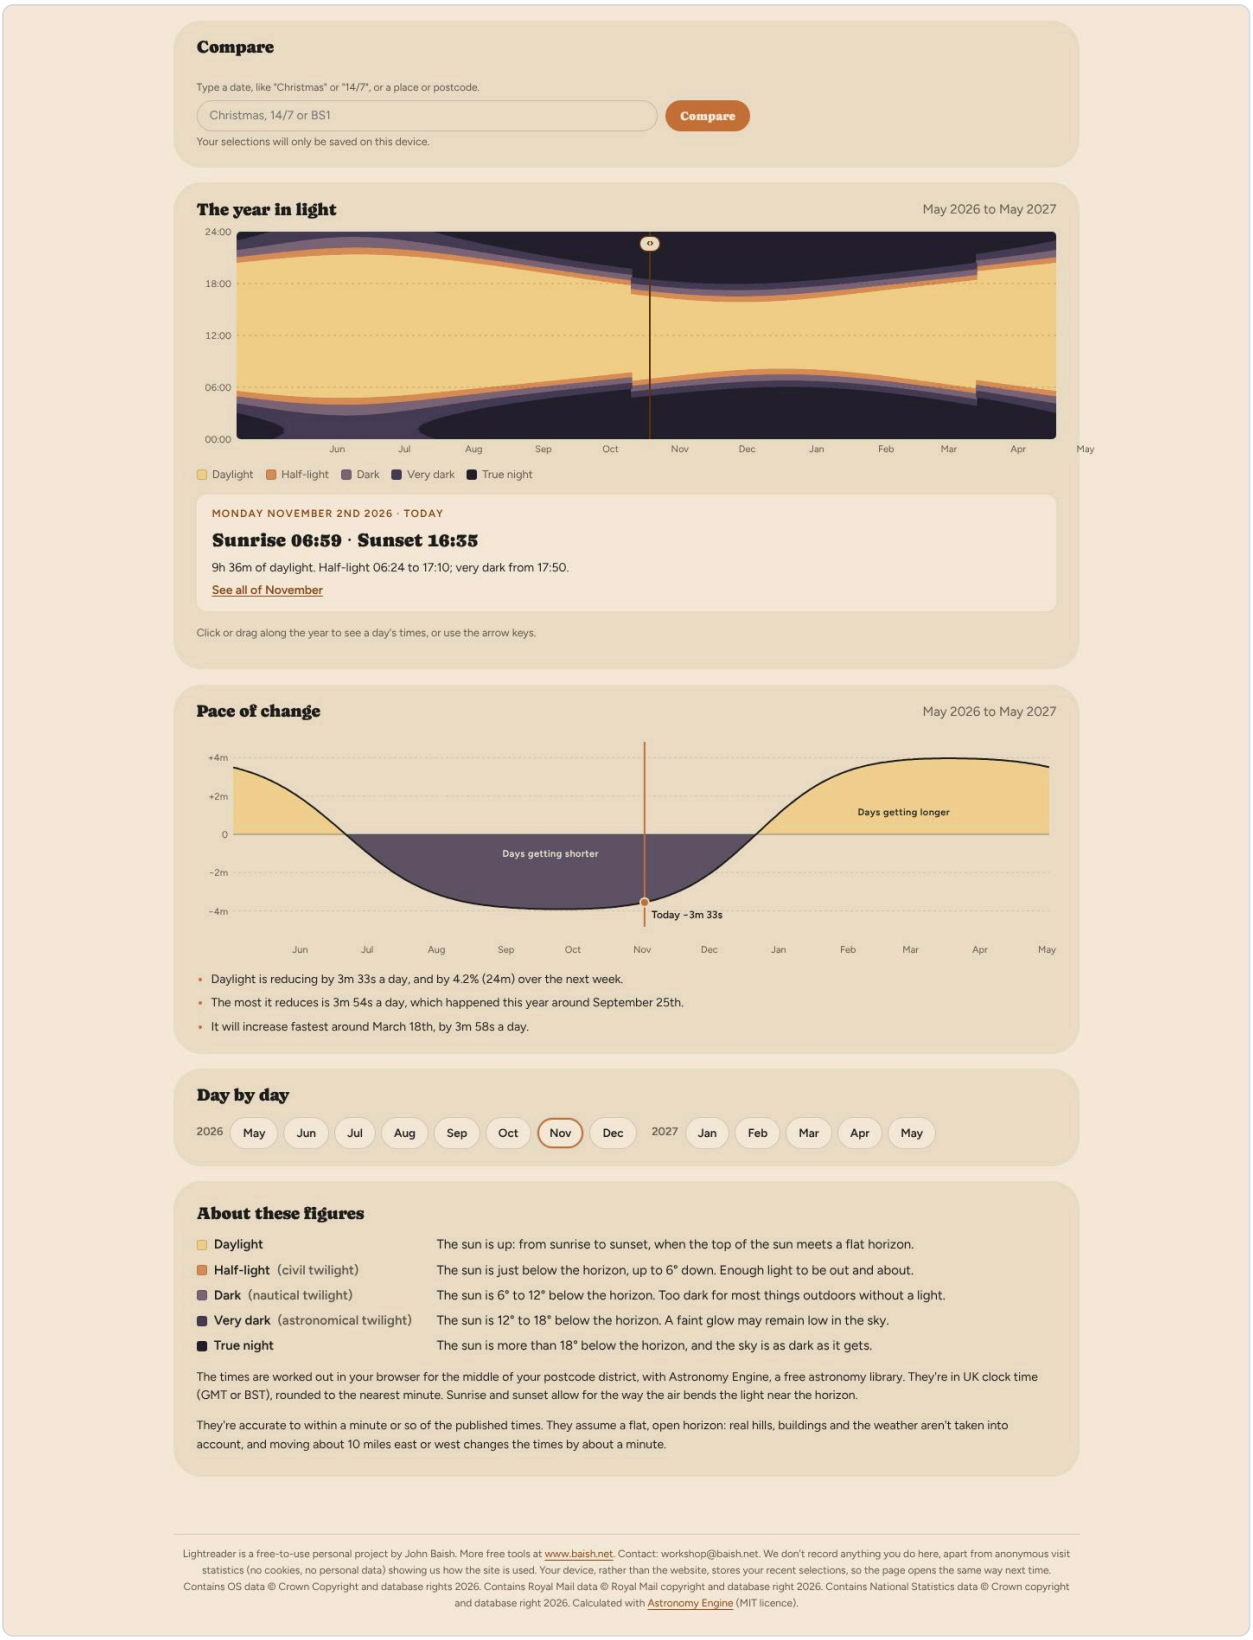

Fig 21. REAL RG4, bottom half: Compare, "The year in light" (each day's light across a year), Pace of change, Day by day, "About these figures" and the footer.

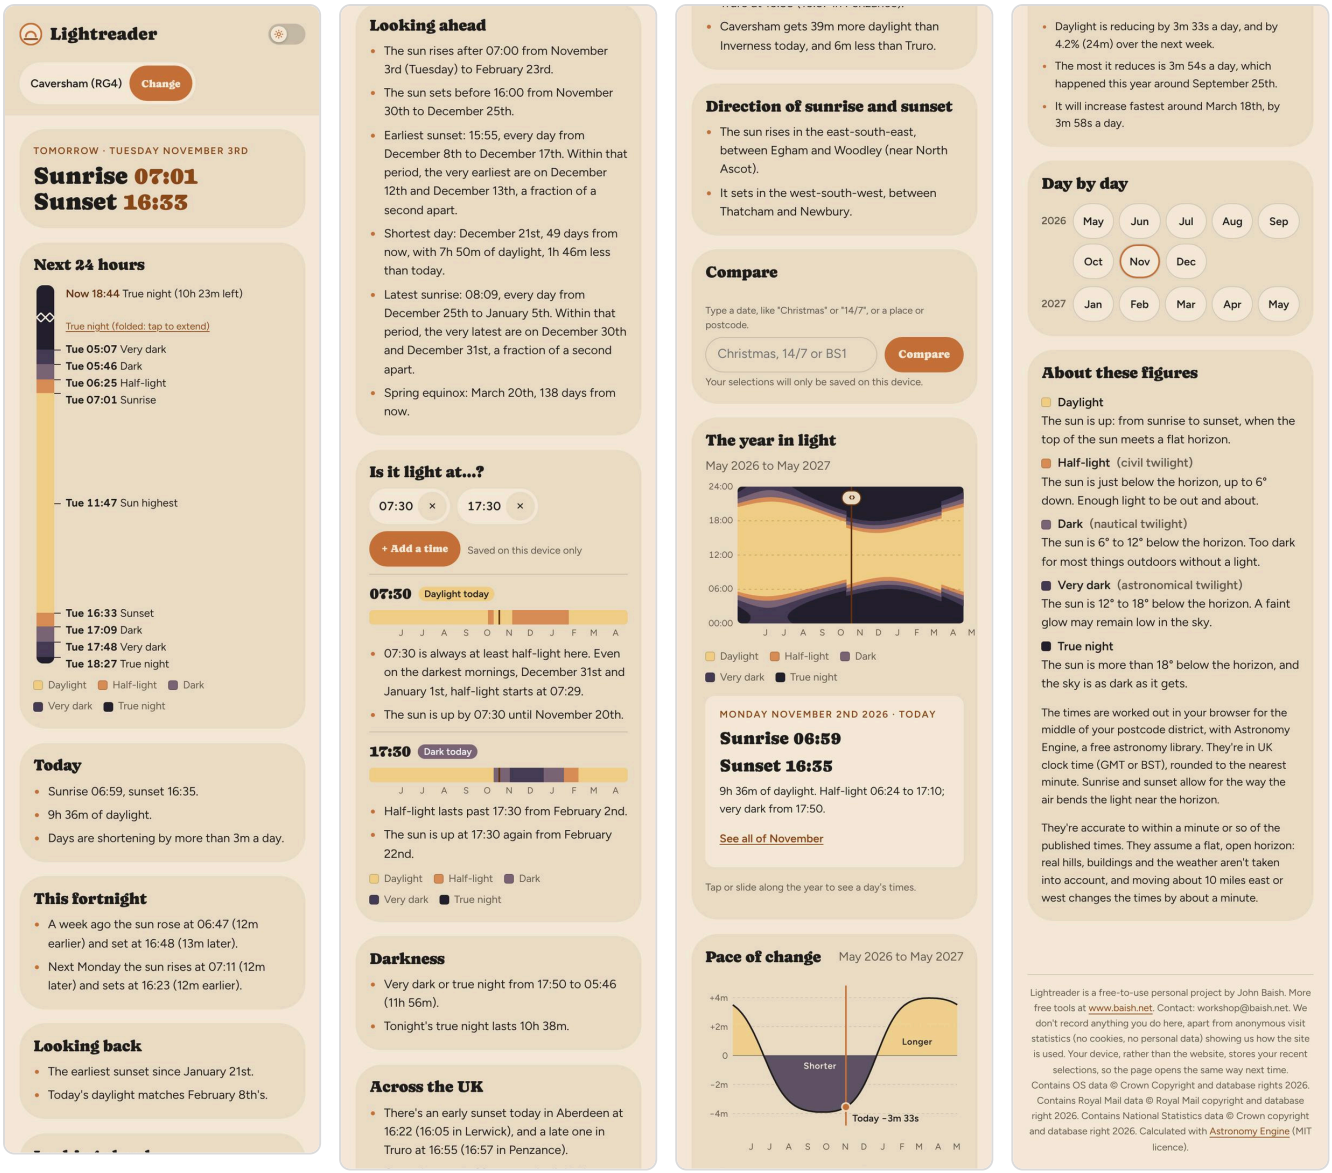

Fig 22. REAL RG4 on a phone (full page, four strips): on a phone the ribbon runs downwards, with true night folded.

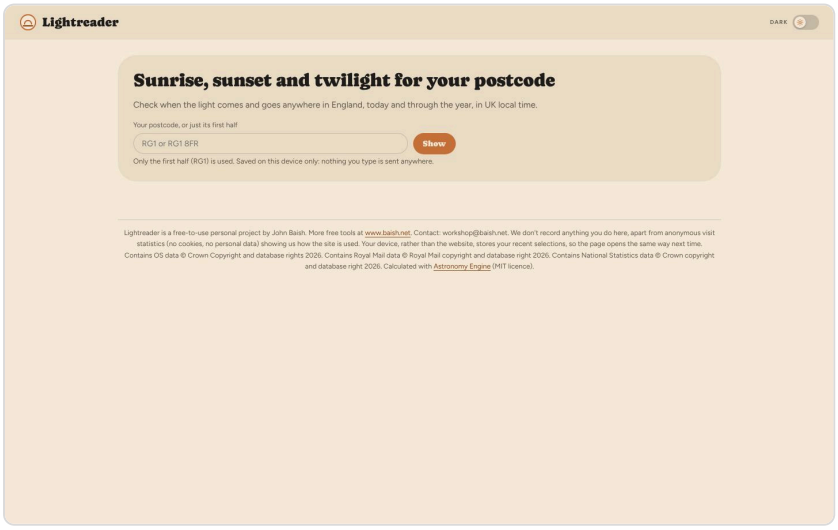

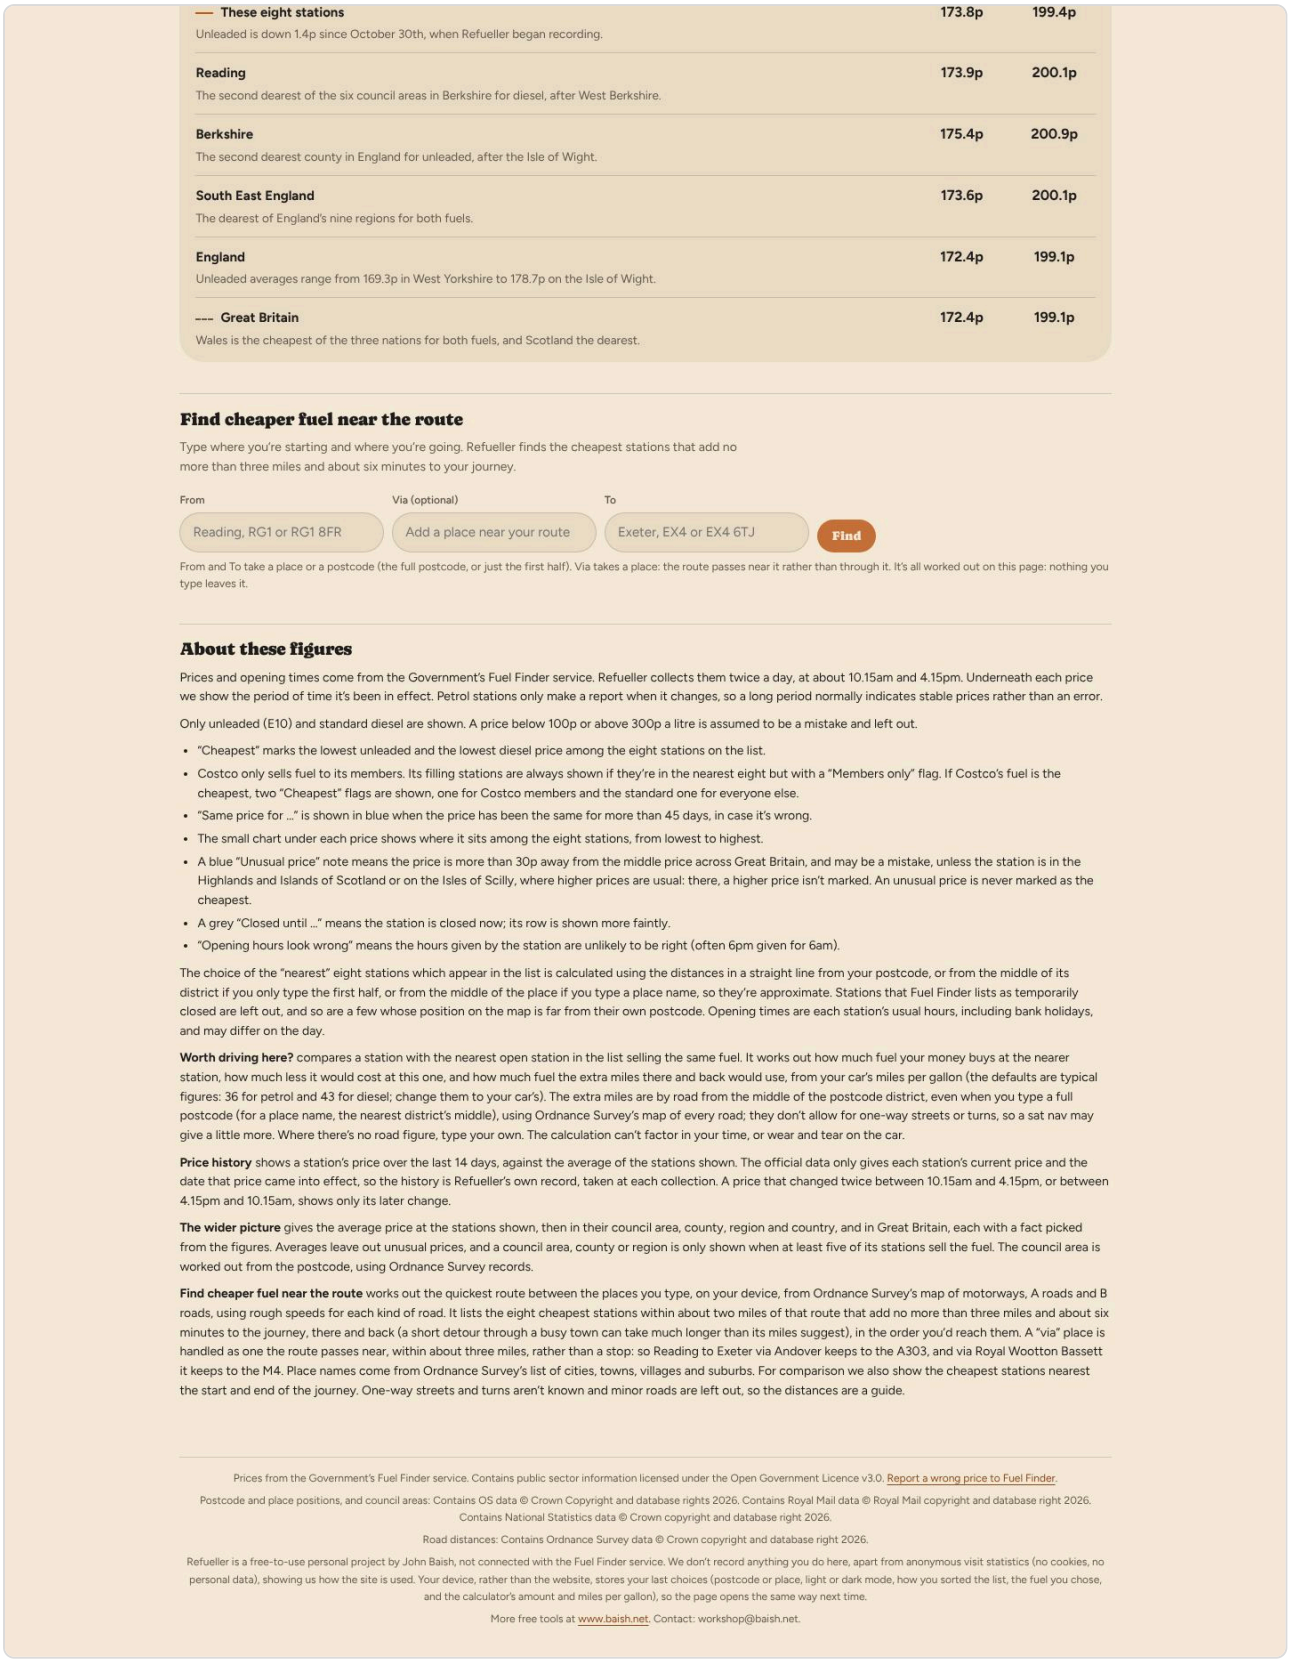

Fig 23. A first visit, before a postcode is chosen.

Fig 24. REAL RG4 (Caversham), prices from the 4.15pm collection on Monday November 2nd (1440px, top half): the eight nearest stations with unleaded and diesel prices, how long each price has stood, where it sits among the eight, and opening hours.

— **These eight stations** Unleaded is down 1.4p since October 30th, when Refueller began recording.	173.8p	199.4p
Reading The second dearest of the six council areas in Berkshire for diesel, after West Berkshire.	173.9p	200.1p
Berkshire The second dearest county in England for unleaded, after the Isle of Wight.	175.4p	200.9p
South East England The dearest of England's nine regions for both fuels.	173.6p	200.1p
England Unleaded averages range from 169.3p in West Yorkshire to 178.7p on the Isle of Wight.	172.4p	199.1p
--- **Great Britain** Wales is the cheapest of the three nations for both fuels, and Scotland the dearest.	172.4p	199.1p

About these figures

Prices and opening times come from the Government's Fuel Finder service. Refueller collects them twice a day, at about 10.15am and 4.15pm. Underneath each price we show the period of time it's been in effect. Petrol stations only make a report when it changes, so a long period normally indicates stable prices rather than an error.

Only unleaded (E10) and standard diesel are shown. A price below 100p or above 300p a litre is assumed to be a mistake and left out.

- "Cheapest" marks the lowest unleaded and the lowest diesel price among the eight stations on the list.
- Costco only sells fuel to its members. Its filling stations are always shown if they're in the nearest eight but with a "Members only" flag. If Costco's fuel is the cheapest, two "Cheapest" flags are shown, one for Costco members and the standard one for everyone else.
- "Same price for ..." is shown in blue when the price has been the same for more than 45 days, in case it's wrong.
- The small chart under each price shows where it sits among the eight stations, from lowest to highest.
- A blue "Unusual price" note means the price is more than 30p away from the middle price across Great Britain, and may be a mistake, unless the station is in the Highlands and Islands of Scotland or on the Isles of Scilly, where higher prices are usual: there, a higher price isn't marked. An unusual price is never marked as the cheapest.
- A grey "Closed until ..." means the station is closed now; its row is shown more faintly.
- "Opening hours look wrong" means the hours given by the station are unlikely to be right (often 6pm given for 6am).

The choice of the "nearest" eight stations which appear in the list is calculated using the distances in a straight line from your postcode, or from the middle of its district if you only type the first half, or from the middle of the place if you type a place name, so they're approximate. Stations that Fuel Finder lists as temporarily closed are left out, and so are a few whose position on the map is far from their own postcode. Opening times are each station's usual hours, including bank holidays, and may differ on the day.

Worth driving here? compares a station with the nearest open station in the list selling the same fuel. It works out how much fuel your money buys at the nearer station, how much less it would cost at this one, and how much fuel the extra miles there and back would use, from your car's miles per gallon (the defaults are typical figures: 36 for petrol and 43 for diesel; change them to your car's). The extra miles are by road from the middle of the postcode district, even when you type a full postcode (for a place name, the nearest district's middle), using Ordnance Survey's map of every road; they don't allow for one-way streets or turns, so a sat nav may give a little more. Where there's no road figure, type your own. The calculation can't factor in your time, or wear and tear on the car.

Price history shows a station's price over the last 14 days, against the average of the stations shown. The official data only gives each station's current price and the date that price came into effect, so the history is Refueller's own record, taken at each collection. A price that changed twice between 10.15am and 4.15pm, or between 4.15pm and 10.15am, shows only its later change.

The wider picture gives the average price at the stations shown, then in their council area, county, region and country, and in Great Britain, each with a fact picked from the figures. Averages leave out unusual prices, and a council area, county or region is only shown when at least five of its stations sell the fuel. The council area is worked out from the postcode, using Ordnance Survey records.

Find cheaper fuel near the route works out the quickest route between the places you type, on your device, from Ordnance Survey's map of motorways, A roads and B roads, using rough speeds for each kind of road. It lists the eight cheapest stations within about two miles of that route that add no more than three miles and about six minutes to the journey, there and back (a short detour through a busy town can take much longer than its miles suggest), in the order you'd reach them. A "via" place is handled as one the route passes near, within about three miles, rather than a stop: so Reading to Exeter via Andover keeps to the A303, and via Royal Wootton Bassett it keeps to the M4. Place names come from Ordnance Survey's list of cities, towns, villages and suburbs. For comparison we also show the cheapest stations nearest the start and end of the journey. One-way streets and turns aren't known and minor roads are left out, so the distances are a guide.

Refueller is a free-to-use personal project by John Baish, not connected with the Fuel Finder service. We don't record anything you do here, apart from anonymous visit statistics (no cookies, no personal data), showing us how the site is used. Your device, rather than the website, stores your last choices (postcode or place, light or dark mode, how you sorted the list, the fuel you chose, and the calculator's amount and miles per gallon), so the page opens the same way next time.

More free tools at www.baish.net. Contact: workshop@baish.net.

Fig 25. REAL RG4, bottom half: "The wider picture" (average prices for these eight, their council area, county, region and country, and Great Britain, each with a fact), the journey planner, "About these figures" and the footer.

Fig 26. REAL RG4 on a phone (full page, four strips): one card per station.

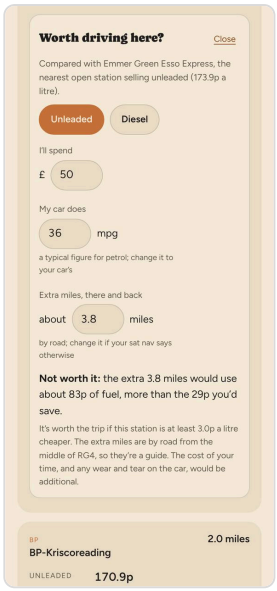

Fig 27. REAL "Worth driving here?" open on a phone: is a cheaper station worth the extra miles?

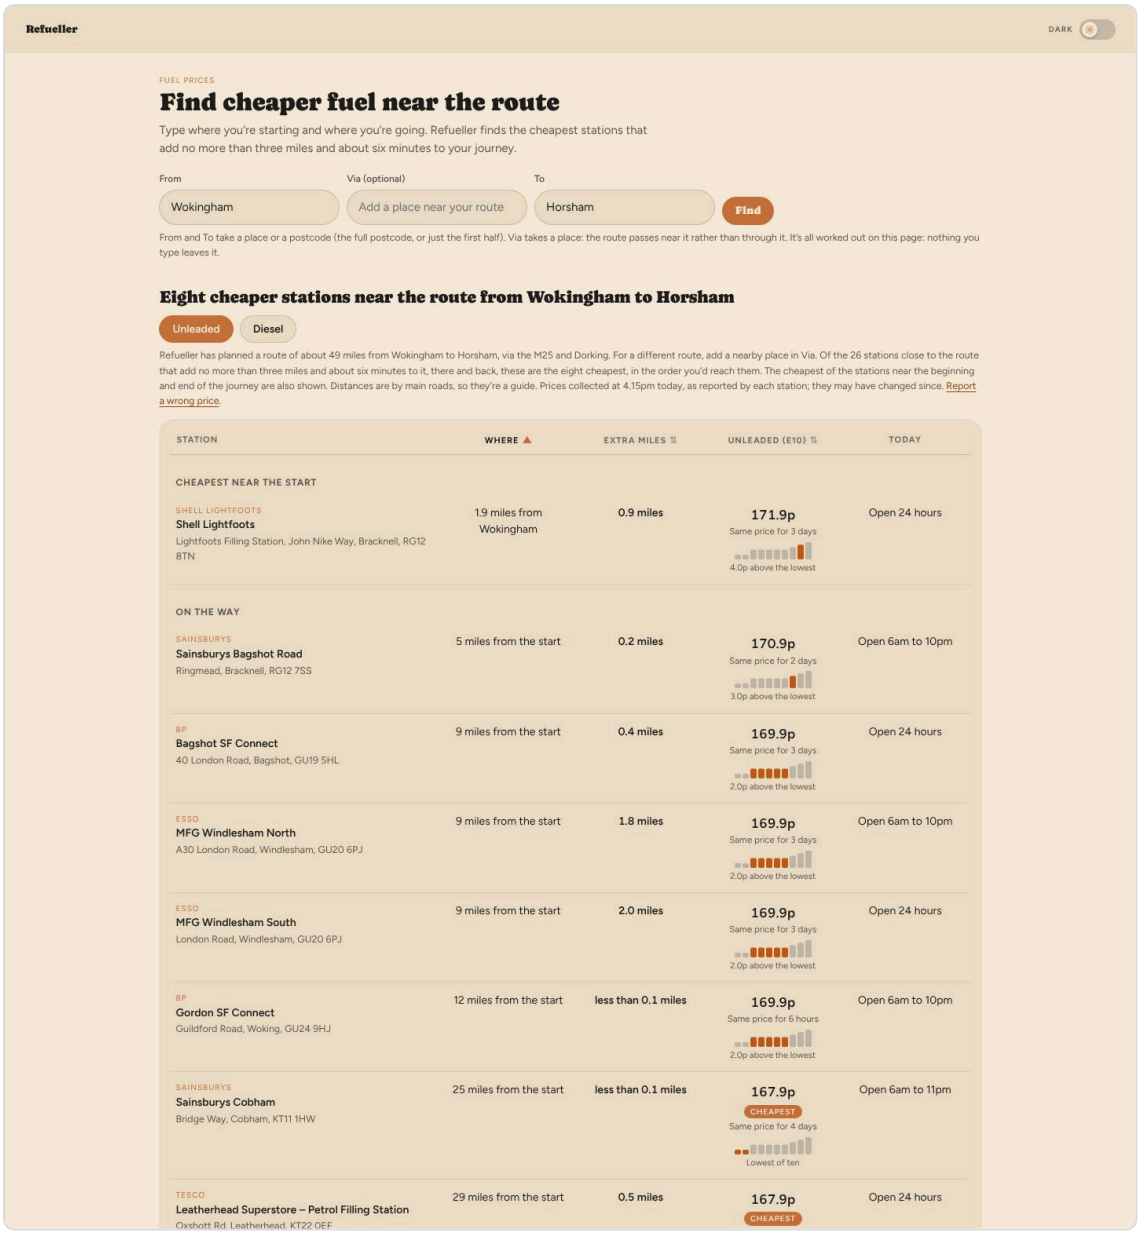

Fig 28. REAL Wokingham to Horsham (1440px, top half): the route described in a sentence, the cheapest stations close to it in the order you'd reach them, and the cheapest near each end.

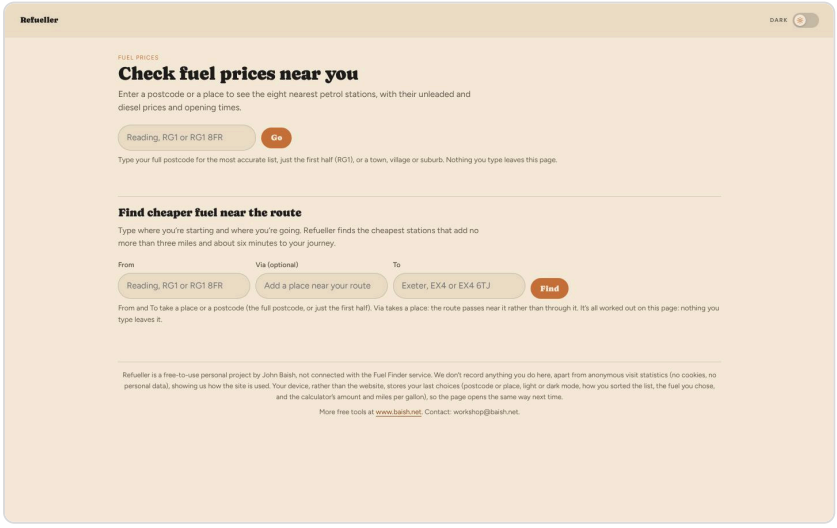

Fig 29. A first visit: the postcode or place box, and the journey planner below.

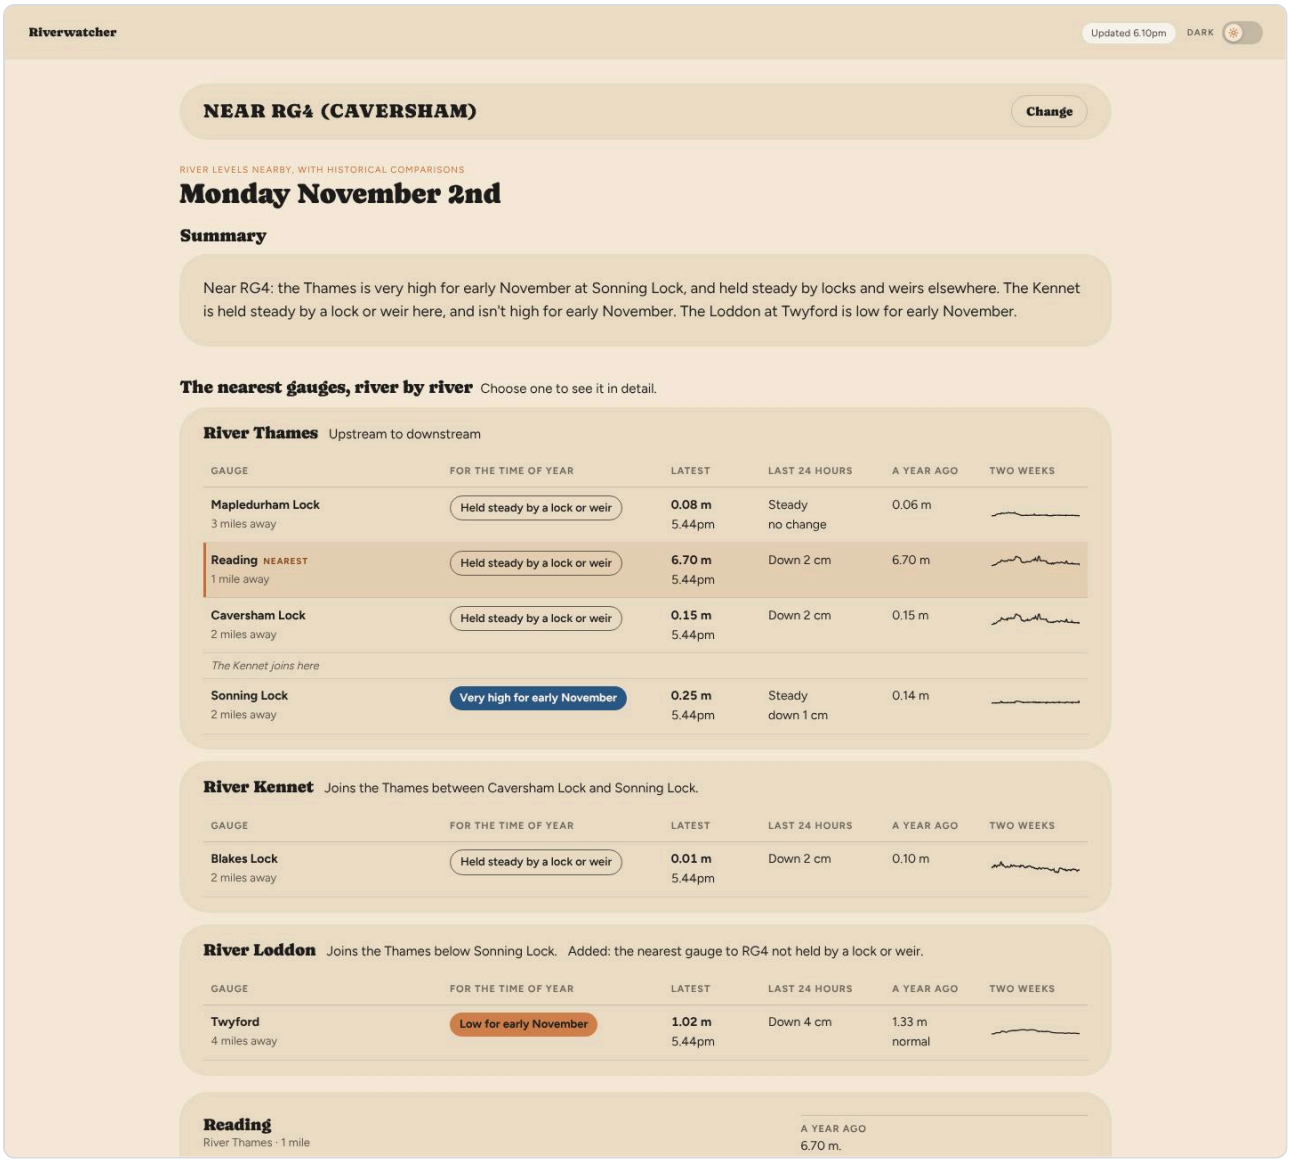

Fig 30. REAL RG4 (Caversham), levels collected at 6.10pm on Monday November 2nd (1440px, top half): the summary river by river, then the nearest gauges grouped by river and listed upstream to downstream. Most Thames gauges are held steady by locks; the Loddon at Twyford is added as the nearest free-flowing gauge.

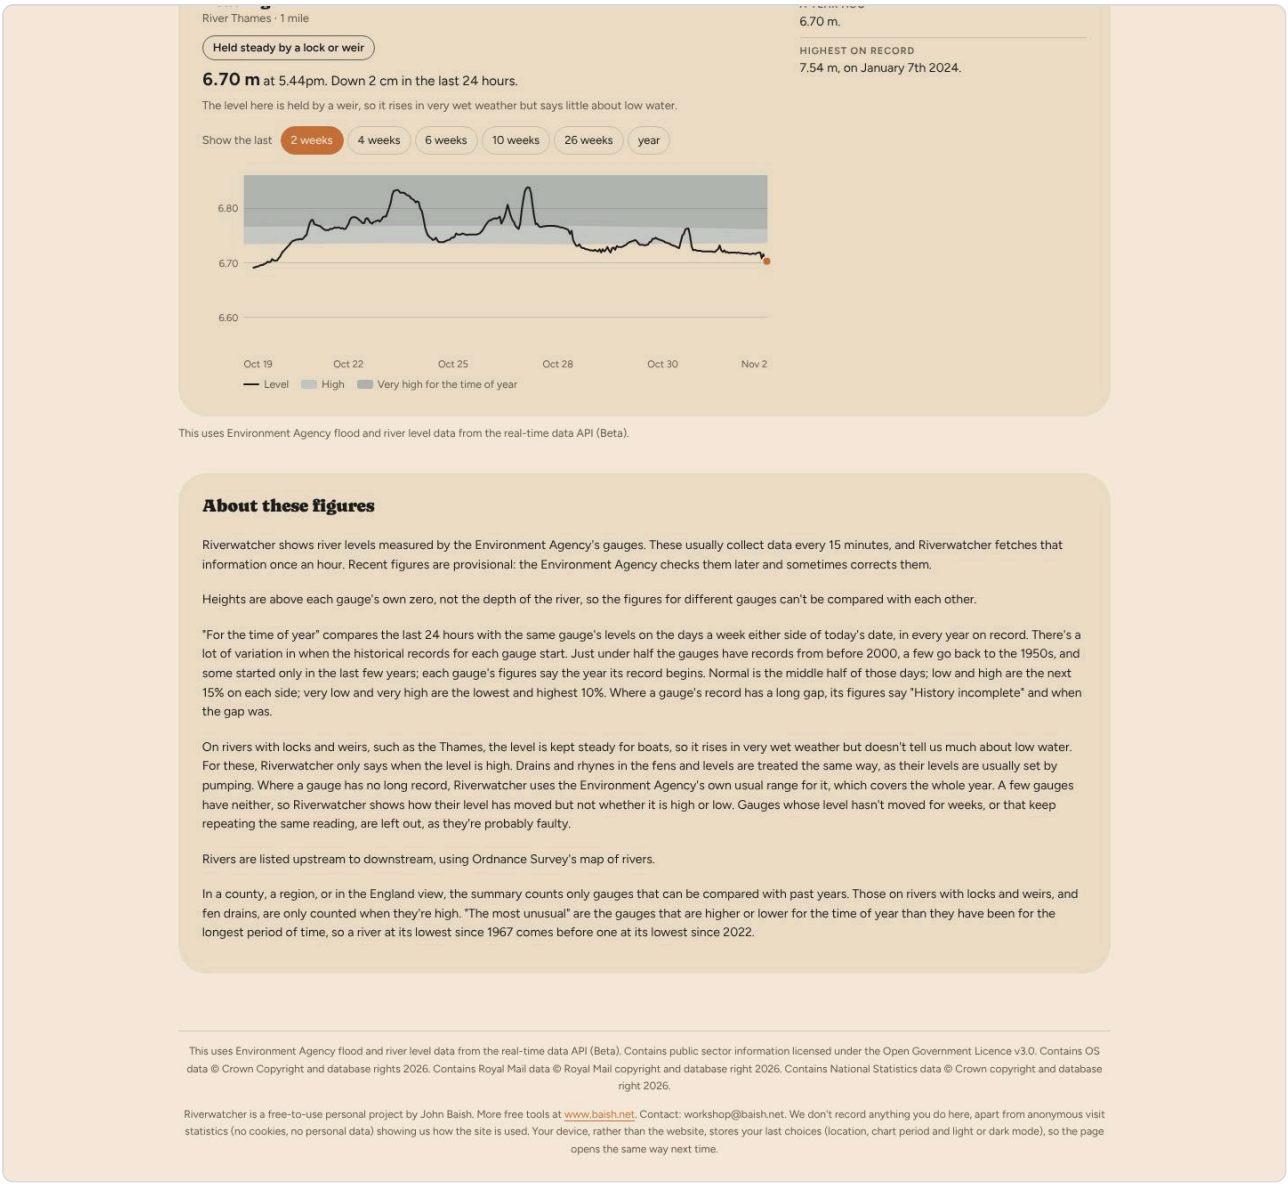

Fig 31. REAL RG4, bottom half: the nearest gauge (Reading) in detail, with its chart against the bands for the time of year, a year ago and its record; then "About these figures" and the footer.

Fig 32. REAL RG4 on a phone (full page, four strips, read left to right).

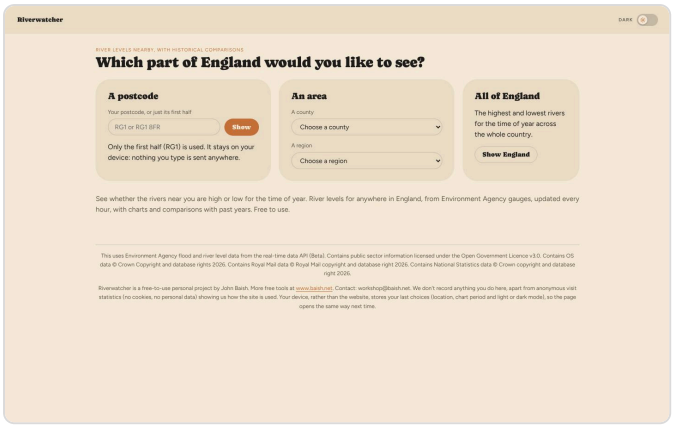

Fig 33. The chooser: a postcode, a county or region, or all of England.

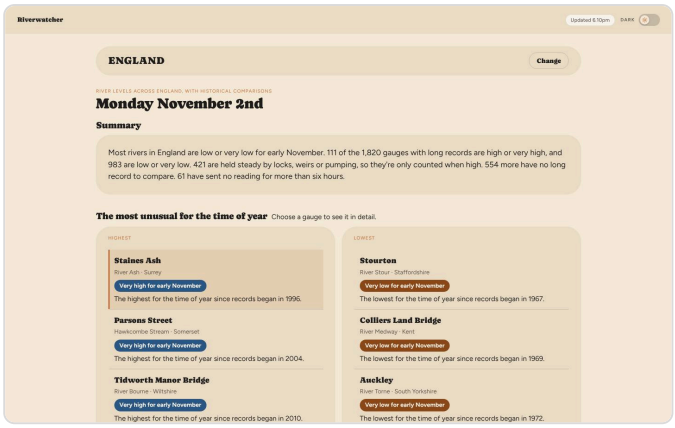

Fig 34. REAL England (first screen): the summary count and the most unusual high and low gauges, ranked by how long since each was last this high or low.

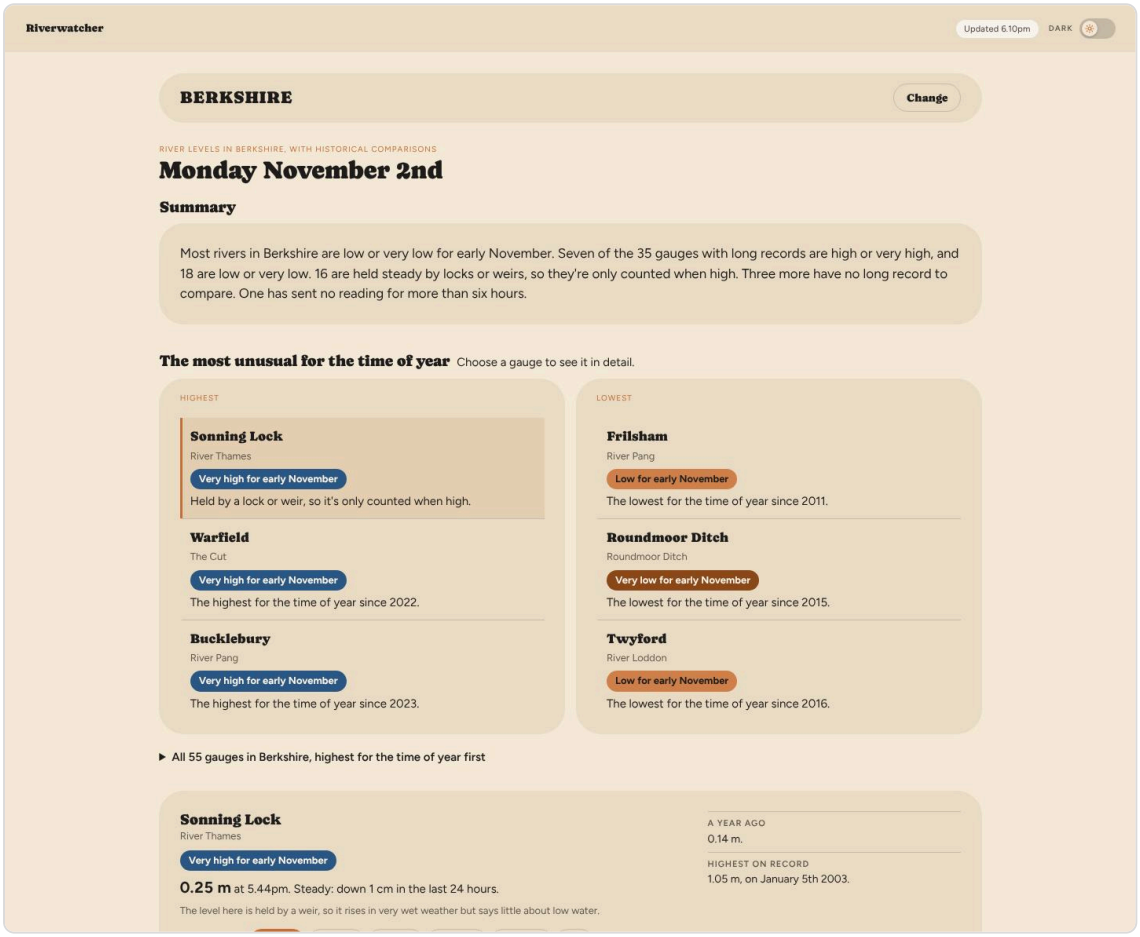

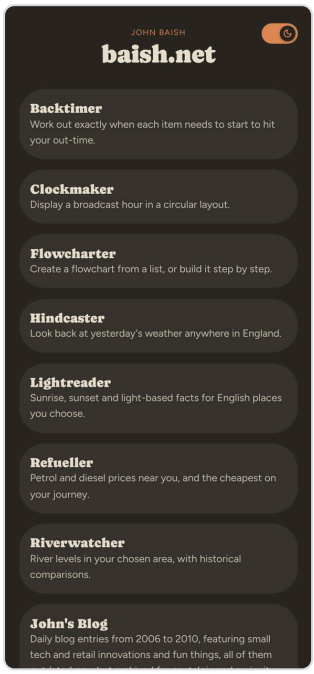

Fig 35. REAL Berkshire (1440px, top half): the summary, the most unusual gauges, and every gauge in the county folded away.

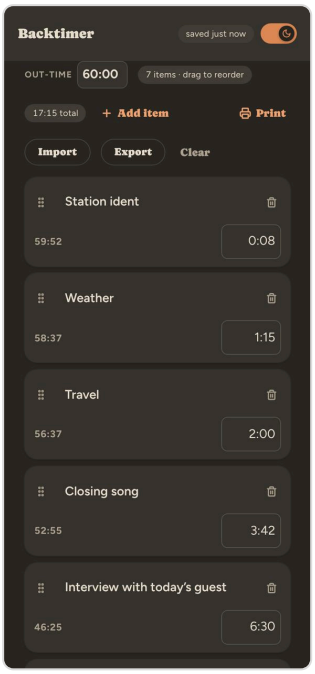

DARK MODE ON EVERY SITE

Dark mode

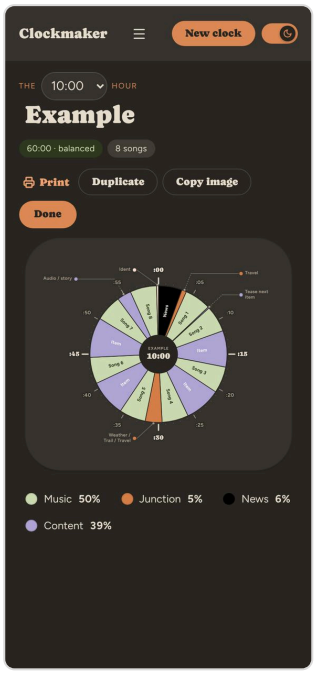

Since October 29th every site has a dark mode that follows the phone or computer's own setting until the visitor uses the switch at the top right. Each site's main screen on a phone, with the device set to dark.
